- Non-toxic • Latex Free • Hypo-Allergenic
- Breathable • "Aggressive" Adhesive
- Blackout layer provides for total occlusion
- Thinner occlusion is gentle on eye lashes.

3M Press-On™ Optics

Ultra-thin 3M Press-On Optics - prisms and spheres
- measure only 1mm thick.

Prisms may be cut to fit most frame sizes and shapes
and adhere to existing lenses with only water.

Aspheric Lenses – plus and minus and as D-segments.

Diplopia (3rd, 4th and 6th nerve palsies, following
cataract surgery, myasthenia gravis, MS Graves Disease).

Phorias (symptomatic or decompensated phorias).

7 Ring Trial Set

- Allow accurate testing of large oculomotor imbalances in the trial frame.
- Fits all standard trial frames & offers excellent optical qualities.
- Made of thin optical quality acrylic and are lightweight.
- Each set includes a display box.
- Available as two sets providing a full range of prisms.

Fresnel trial sets are indispensable as a tool for the proper evaluation of ocular motility disturbances.

These acrylic prisms allow for a more accurate evaluation of large-angle deviations.
