

# VMET-Visual Motor Enhancement Training

The next level of Sports Training. The VMET can be set to be similar to a Saccadic Fixator, but it has targets that are not limited by fixed locations, size, color or shape. Even the background can now be changed to be sport/team specific (using our photos or yours) or a even a video!

The VMET comes with a touchscreen computer for near/far work, too. You can project one target at distance and four at near. The patient is to touch the similar target at near as seen at distance. You can choose letters (such as bdpq), words (such as was, saw, no, on), numbers, pictures (such as arrows or flags). This is great for reversals; dyslexia. Again any background can be used-even videos!

VMET Options:

**VMET32 Unit fits over any Flat Panel 32" TV \$3895**

VMET47 Unit fits over any 47" FP TV add \$160
